

AnnounceFlow

Day 2 & Day 3 Development Prompts

Antigravity IDE (Opus Model)

From: Sunny Kumar Singh (PM) | **To:** Sunny, Ankur & Sushil

Project: AnnounceFlow - Shopify Announcement Bar App

■ ■ **BEFORE STARTING:** Pull latest from dev branch: `git checkout dev && git pull origin dev`

Day 2 Schedule - Sunday, January 11

Time	Sunny	Ankur	Sushil
9:00-11:00	Email Capture Bar	Email Subscribers API	Free Shipping Bar UI
11:00-1:00	Cookie Consent Bar	CSV Export + Free Plan Limit	Email Subscribers Screen
1:00-2:00	LUNCH	LUNCH	LUNCH
2:00-4:00	Integrate Email + Cookie	Branding Logic	Settings Screen
4:00-6:00	Mobile Testing + Fixes	Bug Fixes + GDPR Test	UI Polish + Live Preview

Day 3 Schedule - Monday, January 12

Time	Sunny	Ankur	Sushil
9:00-11:00	App Listing + Screenshots	Fix P1/P2 Bugs	Fix UI Bugs + Help Screen
11:00-1:00	App Icon + Demo Store	Fresh Install Test	Multi-theme Testing
1:00-2:00	LUNCH	LUNCH	LUNCH
2:00-3:00	ALL TEAM BUG BASH	ALL TEAM BUG BASH	ALL TEAM BUG BASH
3:00-4:30	Demo Store Setup	Fix Remaining Bugs	Final UI Fixes
4:30-5:30	SUBMIT APP	Production Verify	Production Verify
5:30-6:00	RETROSPECTIVE	RETROSPECTIVE	RETROSPECTIVE

DAY 2 - Sunday, January 11, 2026

Focus: Bar Types 3-5 (Shipping, Email, Cookie) + Email Storage + Plan Limits

SUNNY - Day 2 Prompts

9:00 - 11:00 AM | Email Capture Bar

Prompt 1: Email Capture Bar (Type 4) - Theme Extension

Continue with AnnounceFlow Theme App Extension.

TASK: Build Email Capture Bar for the storefront

This bar captures visitor emails and sends them to our backend.

Create/update `extensions/announceflow-bars/blocks/announcement-bar.liquid` to support type: "email"

Features:

1. Display headline text (e.g., "Get 10% off your first order!")
2. Email input field with placeholder text
3. Submit button with customizable text
4. Success message after submission
5. Error message for invalid email
6. Loading state while submitting

JSON config structure:

```
{
  "id": "email-1",
  "type": "email",
  "enabled": true,
  "content": {
    "headline": "Get 10% off your first order!",
    "placeholder": "Enter your email",
    "button_text": "Subscribe",
    "success_message": "Thanks! Check your inbox.",
    "error_message": "Please enter a valid email"
  },
  "style": {
    "position": "top",
    "bg_color": "#1E3A5F",
    "text_color": "FFFFFF",
    "button_bg_color": "#E74C3C",
    "button_text_color": "FFFFFF"
  },
  "settings": { "dismissible": true }
}
```

JavaScript should:

- Validate email format before submit
- POST to `/apps/announceflow/api/subscribe` endpoint
- Show loading spinner on button while submitting
- Show success message and hide form on success
- Show error message on failure
- Store submission in `localStorage` to prevent repeat popups

CSS:

- Inline form layout (input + button side by side)
- Stack vertically on mobile
- Input and button styling
- Success/error message styling

Show complete implementation.

Prompt 2: Email Capture Bar - Admin UI

Continue with AnnounceFlow.

TASK: Add Email Capture bar type to admin form

Update app/routes/app.bars.new.tsx and app/routes/app.bars.\$id.tsx

When user selects "Email Capture" from bar type dropdown, show these fields:

CONTENT SECTION:

- Headline text (TextField, required, max 100 chars)
- Input placeholder (TextField, default: "Enter your email")
- Button text (TextField, default: "Subscribe")
- Success message (TextField, default: "Thanks! Check your inbox.")
- Error message (TextField, default: "Please enter a valid email")

STYLE SECTION:

- Position (Top/Bottom)
- Background color
- Text color
- Button background color (NEW field)
- Button text color (NEW field)

SETTINGS SECTION:

- Enable this bar (Checkbox)
- Allow dismiss (Checkbox)

PREMIUM BADGE:

- Show "Premium" badge next to Email Capture option
- If user is on Free plan and selects this, show upgrade modal

Update the BarPreview component to render email capture preview:

- Show input field and button
- Update colors in real-time

Form validation:

- Headline is required
- Show error if Free plan user tries to save

Show complete implementation.

11:00 AM - 1:00 PM | Cookie Consent Bar

Prompt 3: Cookie Consent Bar (Type 5) - Theme Extension

Continue with AnnounceFlow Theme App Extension.

TASK: Build Cookie Consent Bar for GDPR compliance

Create cookie consent bar in announcement-bar.liquid for type: "cookie"

Features:

1. Consent message text
2. "Accept" button
3. "Decline" button
4. Link to Privacy Policy
5. Remember choice in localStorage
6. Don't show again if already accepted/declined

JSON config structure:

```
{
  "id": "cookie-1",
  "type": "cookie",
  "enabled": true,
  "content": {
    "message": "We use cookies to improve your experience.",
    "accept_text": "Accept",
    "decline_text": "Decline",
    "privacy_link": "/pages/privacy-policy",
    "privacy_text": "Learn more"
  },
  "style": {
    "position": "bottom",
    "bg_color": "#2C3E50",
    "text_color": "FFFFFF",
    "button_bg_color": "#27AE60",
    "button_text_color": "FFFFFF"
  },
  "settings": { "show_decline": true }
}
```

JavaScript should:

- Check localStorage for existing consent on page load
- If consent exists, don't show bar
- On Accept: Set localStorage 'announceflow_consent' = 'accepted', hide bar
- On Decline: Set localStorage 'announceflow_consent' = 'declined', hide bar
- Fire optional analytics event on consent

CSS:

- Position fixed at bottom (overlays content)
- Buttons side by side
- Privacy link styled as text link
- Smooth slide-up animation
- Mobile responsive (buttons stack)

Show complete implementation.

Prompt 4: Cookie Consent Bar - Admin UI

Continue with AnnounceFlow.

TASK: Add Cookie Consent bar type to admin form

Update the bar creation/edit forms.

When user selects "Cookie Consent" from bar type dropdown, show:

CONTENT SECTION:

- Consent message (TextArea, required, max 200 chars)
- Accept button text (TextField, default: "Accept")
- Decline button text (TextField, default: "Decline")
- Privacy policy URL (TextField, required, validate URL)
- Privacy link text (TextField, default: "Learn more")

STYLE SECTION:

- Position (recommend Bottom, but allow Top)
- Background color
- Text color
- Button background color
- Button text color

SETTINGS SECTION:

- Enable this bar (Checkbox)
- Show decline button (Checkbox, default: true)

Update BarPreview component:

- Render cookie consent preview
- Show both buttons (or just Accept if decline disabled)
- Show privacy link

Validation:

- Message is required
- Privacy URL is required and must be valid URL

Show complete implementation.

2:00 - 4:00 PM | Integration

Prompt 5: Integrate All Bar Types + Admin Connection

Continue with AnnounceFlow.

TASK: Integrate all 5 bar types and ensure admin-to-storefront connection works

1. Update Theme Extension to handle all bar types:

- Promotional (Day 1) ✓
- Countdown (Day 1) ✓
- Free Shipping (Sushil building UI, you build Liquid)
- Email Capture (just built)
- Cookie Consent (just built)

2. Build Free Shipping Bar Liquid template:

```
{
  "id": "shipping-1",
  "type": "shipping",
  "enabled": true,
  "content": {
    "threshold": 500,
    "currency": "INR",
    "message_template": "Spend {remaining} more for FREE shipping!",
```

```
    "success_message": "You've unlocked FREE shipping!"
  },
  "style": { "position": "top", "bg_color": "#27AE60", "text_color": "#FFFFFF" },
  "settings": { "show_progress_bar": true, "dismissible": false }
}
```

Free Shipping Liquid should:

- Read cart total from {{ cart.total_price }}
- Calculate remaining amount: threshold - cart_total
- Show progress bar (percentage filled)
- Update message dynamically
- Show success message when threshold reached

3. Test the complete flow:

- Create each bar type in admin
- Verify it appears on storefront
- Verify styles apply correctly
- Verify interactions work (dismiss, submit, countdown)

4. Handle multiple bars:

- If multiple bars enabled, stack them (first by position, then by creation order)
- Or show only one bar at a time based on priority

Show complete Theme Extension code supporting all 5 bar types.

4:00 - 6:00 PM | Mobile Testing

Prompt 6: Mobile Responsiveness + Bug Fixes

Continue with AnnounceFlow.

TASK: Ensure all bars are mobile responsive and fix any bugs

1. Mobile CSS updates for all bar types:

PROMOTIONAL BAR:

- Text wraps properly
- CTA button goes below text on small screens
- Close button always visible
- Min-height for touch targets (44px)

COUNTDOWN BAR:

- Countdown digits remain readable
- Consider smaller font on mobile
- Message text wraps

FREE SHIPPING BAR:

- Progress bar scales properly
- Text doesn't overflow
- Currency symbol visible

EMAIL CAPTURE BAR:

- Input and button stack vertically on mobile
- Full-width input and button
- Keyboard doesn't cover input (position consideration)

COOKIE CONSENT BAR:

- Buttons stack vertically on mobile
- Privacy link on separate line
- Enough padding for readability

2. CSS breakpoints to add:

```
@media (max-width: 768px) { /* Tablet */ }  
@media (max-width: 480px) { /* Mobile */ }
```

3. Test on:

- iPhone viewport (375px)
- Android viewport (360px)
- Tablet viewport (768px)

4. Check for:

- Text overflow
- Button tap targets (min 44px)
- Readability
- No horizontal scroll
- Proper spacing

5. Fix any console errors found during testing

Show updated CSS with mobile responsive styles.

ANKUR - Day 2 Prompts

9:00 - 11:00 AM | Email Subscribers API

Prompt 1: Email Subscribers Storage + API

Continue with AnnounceFlow backend.

TASK: Build email subscriber storage and API endpoints

1. Create API route for storefront submissions:

POST /apps/announceflow/api/subscribe

This is called from the Theme Extension (storefront), NOT admin.

Request body:

```
{ "email": "customer@example.com", "bar_id": "email-1" }
```

Should:

- Validate email format
- Get shop from request (via metafield owner or session)
- Check for duplicate email (same shop)
- Save to EmailSubscriber table
- Return { success: true } or { error: "message" }

Handle CORS for storefront requests.

2. Create admin API routes:

GET /api/subscribers

- List all subscribers for current shop
- Include pagination (limit, offset)
- Return { subscribers: [...], total: number }

GET /api/subscribers/export

- Generate CSV of all subscribers
- Columns: email, bar_id, subscribed_at
- Return CSV file download

DELETE /api/subscribers/:id

- Delete single subscriber
- Return { success: true }

3. Update database helpers (db.server.ts):

- createSubscriber(shopId, email, barId, ipAddress?)
- getSubscribersByShop(shopId, limit?, offset?)
- getSubscriberCount(shopId)
- deleteSubscriber(id)
- exportSubscribersCSV(shopId)

4. Rate limiting:

- Max 10 submissions per minute per IP
- Prevent spam submissions

Show complete implementation.

11:00 AM - 1:00 PM | CSV Export + Plan Limits

Prompt 2: CSV Export Implementation

Continue with AnnounceFlow backend.

TASK: Implement CSV export for email subscribers

1. CSV Export endpoint: GET /api/subscribers/export

Implementation:

- Query all subscribers for shop
- Generate CSV with headers: Email, Bar Name, Subscribed Date
- Set proper headers for file download:
Content-Type: text/csv
Content-Disposition: attachment; filename="subscribers-{date}.csv"
- Stream large exports (if > 1000 rows)

2. CSV format:

```
Email,Bar Name,Subscribed Date
john@example.com>Welcome Discount,2026-01-11T10:30:00Z
jane@example.com,Newsletter,2026-01-11T11:45:00Z
```

3. Date formatting:

- Use ISO format for dates
- Or human-readable: "Jan 11, 2026 10:30 AM"

4. Handle edge cases:

- No subscribers: Return empty CSV with just headers
- Special characters in email: Properly escape for CSV
- Large exports: Consider streaming or pagination

5. Premium check:

- CSV export might be premium-only feature
- Check shop plan before allowing export
- Return 402 if not premium

Show complete implementation with proper CSV generation.

Prompt 3: Free Plan Bar Limit

Continue with AnnounceFlow backend.

TASK: Implement Free plan bar limit (1 bar maximum)

1. Update bar creation API (POST /api/bars):

Before creating bar:

- Get shop's current plan
- If FREE plan:
 - Count existing bars for shop
 - If count >= 1, return error:
{ error: "Free plan limited to 1 bar. Upgrade to Premium for unlimited bars.", code: "PLAN_LIMIT" }
- If PREMIUM plan: Allow unlimited bars

2. Create plan check helper:

```
async function checkBarLimit(shopId: string): Promise<{allowed: boolean, reason?: string}>
```

Returns:

- { allowed: true } if can create more bars
- { allowed: false, reason: "..."} if at limit

3. Update bar toggle API (PATCH /api/bars/:id/toggle):

Free plan can only have 1 ENABLED bar:

- If enabling a bar on Free plan
- Check if another bar is already enabled
- Either: Auto-disable other bar, OR return error

4. API response for limit reached:

Status: 402 Payment Required

```
Body: {
  error: "Bar limit reached",
  code: "PLAN_LIMIT",
  current_plan: "FREE",
  bar_limit: 1,
  bar_count: 1,
  upgrade_url: "/api/billing/subscribe"
}
```

5. Add bar count to dashboard API:

GET /api/bars should also return:

```
{
  bars: [...],
  plan: "FREE",
  bar_limit: 1,
  bar_count: 1,
  can_create_more: false
}
```

Show complete implementation.

2:00 - 4:00 PM | Branding Logic

Prompt 4: Free Plan Branding Logic

Continue with AnnounceFlow backend.

TASK: Implement "Powered by AnnounceFlow" branding for Free plan

1. Update metafield structure:

When saving bars to metafield, include plan info:

```
{
  "bars": [...],
  "settings": {
    "plan": "FREE",
    "show_branding": true
  }
}
```

2. Plan-based branding rules:

FREE plan:

- show_branding: true (always)

- Cannot be turned off

PREMIUM plan:

- show_branding: false (default)
- Can optionally turn on (for affiliate program later)

3. Update bar save logic:

When saving any bar:

- Check current plan
- Set show_branding accordingly
- Save to metafield

4. When plan changes (upgrade):

```
async function onPlanUpgrade(shopId: string) {  
  // Get current bars config  
  // Update show_branding to false  
  // Save back to metafield  
}
```

5. When plan changes (downgrade/cancel):

```
async function onPlanDowngrade(shopId: string) {  
  // Update show_branding to true  
  // If more than 1 bar, disable extras (keep oldest)  
  // Save back to metafield  
}
```

6. API to check branding status:

```
GET /api/settings/branding  
Returns: { show_branding: boolean, can_disable: boolean }
```

Show complete implementation.

4:00 - 6:00 PM | Bug Fixes + GDPR Test

Prompt 5: Bug Fixes + GDPR Webhook Testing

Continue with AnnounceFlow backend.

TASK: Fix bugs and thoroughly test GDPR webhooks

1. GDPR Webhook Testing Script:

Create a test script: `scripts/test-gdpr-webhooks.ts`

Test `customers/data_request`:

- Create test subscriber
- Send webhook request
- Verify response contains subscriber data
- Verify 200 status

Test `customers/redact`:

- Create test subscriber
- Send webhook request
- Verify subscriber deleted from database
- Verify 200 status

Test `shop/redact`:

- Create test shop with subscribers
- Send webhook request
- Verify all data deleted
- Verify 200 status

2. HMAC Verification Test:

- Test with valid HMAC: Should process
- Test with invalid HMAC: Should reject (401)
- Test with missing HMAC: Should reject

3. Create test helper:

```
function generateTestWebhook(topic: string, payload: object) {  
  const hmac = crypto.createHmac('sha256', SHOPIFY_SECRET)  
    .update(JSON.stringify(payload))  
    .digest('base64');  
  return { payload, hmac };  
}
```

4. Common bugs to check and fix:

- Prisma connection errors
- Missing environment variables
- CORS issues on storefront API
- Session token expiration
- Rate limiting not working

5. Add error logging:

- Log all webhook calls
- Log all errors with stack traces
- Use structured logging (JSON format)

Show test script and any bug fixes made.

SUSHIL - Day 2 Prompts

9:00 - 11:00 AM | Free Shipping Bar UI

Prompt 1: Free Shipping Bar Admin UI

Continue with AnnounceFlow frontend.

TASK: Add Free Shipping bar type to admin form

Update bar creation/edit forms.

When user selects "Free Shipping Progress" from dropdown:

CONTENT SECTION:

- Shipping threshold amount (NumberField, required)
- Currency (Select: INR, USD, EUR, GBP)
- Progress message (TextField with {remaining} placeholder)
Default: "Spend {remaining} more for FREE shipping!"
- Success message (TextField)
Default: "Congratulations! You've unlocked FREE shipping!"

STYLE SECTION:

- Position (Top/Bottom)
- Background color
- Text color
- Progress bar color (NEW field)
- Progress bar background color (NEW field)

SETTINGS SECTION:

- Enable this bar (Checkbox)
- Show progress bar visual (Checkbox, default: true)
- Dismissible (Checkbox, default: false)

PREVIEW COMPONENT UPDATE:

- Show progress bar at 50% (demo)
- Show message with sample remaining amount
- Update progress bar color in real-time

Validation:

- Threshold must be positive number
- Threshold must be reasonable (< 100000)

Show complete implementation.

11:00 AM - 1:00 PM | Email Subscribers Screen

Prompt 2: Email Subscribers Admin Screen

Continue with AnnounceFlow frontend.

TASK: Build Email Subscribers screen

File: app/routes/app.subscribers.tsx

1. Page layout:
 - Title: "Email Subscribers"
 - Primary action: "Export CSV" button
2. Stats cards at top:
 - Total subscribers count
 - Subscribers this week
 - Subscribers this month
3. Subscribers table (IndexTable):
Columns:
 - Email
 - Source (which bar captured them)
 - Subscribed date
 - Actions (Delete)
4. Features:
 - Pagination (25 per page)
 - Search/filter by email
 - Sort by date (newest first)
 - Bulk delete (select multiple)
5. Empty state:
 - Show when no subscribers
 - "No subscribers yet. Create an Email Capture bar to start collecting emails."
 - Button: "Create Email Bar"
6. Export CSV:
 - Click "Export CSV"
 - Show loading state
 - Download file automatically
 - Show success toast
7. Delete confirmation:
 - Single delete: "Delete this subscriber?"
 - Bulk delete: "Delete {count} subscribers?"
8. Premium check:
 - If Free plan, show upgrade banner
 - "Upgrade to Premium to access Email Capture bars"

Connect to Ankur's API:

- GET /api/subscribers
- DELETE /api/subscribers/:id
- GET /api/subscribers/export

Show complete implementation.

2:00 - 4:00 PM | Settings Screen

Prompt 3: App Settings Screen

Continue with AnnounceFlow frontend.

TASK: Build Settings screen

File: app/routes/app.settings.tsx

1. Page layout:

- Title: "Settings"
- Organized in sections using Cards

2. PLAN SECTION:

Card title: "Your Plan"

If FREE:

- "Free Plan" badge
- "1 bar limit"
- "Powered by AnnounceFlow branding"
- [Upgrade to Premium] button

If PREMIUM:

- "Premium Plan" badge (green)
- "\$99/month"
- "Unlimited bars"
- "No branding"
- [Manage Subscription] link

3. GLOBAL SETTINGS SECTION:

Card title: "Default Settings"

- Default bar position (Select: Top/Bottom)
- Default background color (ColorPicker)
- Default text color (ColorPicker)

These are used as defaults when creating new bars.

4. BRANDING SECTION (Premium only):

Card title: "Branding"

- Checkbox: "Show 'Powered by AnnounceFlow' on bars"
- Note: "Keep this on to support AnnounceFlow!"

5. DATA SECTION:

Card title: "Your Data"

- Total bars created: X
- Total email subscribers: X
- [Export All Data] button
- [Delete All Data] button (destructive, with confirmation)

6. SUPPORT SECTION:

Card title: "Help & Support"

- Link: Documentation
- Link: Contact Support
- Link: Feature Request

7. Save functionality:
 - Auto-save on change, OR
 - Save button at bottom
 - Show toast on save

Show complete implementation.

4:00 - 6:00 PM | UI Polish

Prompt 4: UI Polish + Complete Live Preview

Continue with AnnounceFlow frontend.

TASK: Polish UI and complete Live Preview for all bar types

1. Update BarPreview component to support ALL 5 bar types:

PROMOTIONAL:

- Text + CTA button + close button

COUNTDOWN:

- Text + live countdown (use fake time for preview)
- Format: "02d 14h 35m 42s"

FREE SHIPPING:

- Progress message with amount
- Visual progress bar
- Animate progress bar in preview

EMAIL CAPTURE:

- Input field + submit button
- Disabled (non-functional in preview)

COOKIE CONSENT:

- Message + Accept + Decline buttons
- Privacy link

2. Preview improvements:

- Add animation when values change
- Smooth color transitions
- Device frame around preview (optional)
- Dark mode preview option

3. Form UX improvements:

- Add help text under complex fields
- Add character counters for text fields
- Show color contrast warning if poor readability
- Add "Reset to defaults" button

4. Dashboard improvements:

- Bar type icons in list
- Quick preview on hover (tooltip)
- Drag to reorder bars (optional)
- Last edited timestamp

5. Loading states:

- Skeleton loading for all pages
- Button loading states
- Optimistic updates

6. Error states:

- Friendly error messages
- Retry buttons
- Offline indicator

7. Accessibility:

- All interactive elements keyboard accessible
- Focus indicators visible
- Screen reader labels

8. Console cleanup:

- Remove all console.log
- Fix any React warnings

Show key improvements made.

DAY 3 - Monday, January 12, 2026 (LAUNCH DAY)

Focus: Bug Fixes, Polish, App Listing, SUBMISSION BY 5 PM!

■ ■ **CRITICAL:** All code must be merged to dev by 2 PM. After 2 PM = bug fixes only!

SUNNY - Day 3 Prompts

9:00 - 11:00 AM | App Listing

Prompt 1: Shopify App Listing Content

TASK: Prepare Shopify App Listing content

This is NOT code - this is content for the Shopify Partner Dashboard.

1. APP NAME:
AnnounceFlow
2. TAGLINE (80 chars max):
"Beautiful announcement bars that boost sales and capture emails"
3. SHORT DESCRIPTION (100 chars):
"Create promotional banners, countdown timers, free shipping bars, and email capture - no coding needed."
4. DETAILED DESCRIPTION (write compelling copy):

Include:
 - What the app does
 - Key features (5 bar types)
 - Benefits (increase sales, grow email list, GDPR compliance)
 - Easy setup (no coding)
 - Free plan available
 - Premium features
5. KEY FEATURES (bullet points for listing):
 - 5 Bar Types: Promotional, Countdown, Free Shipping, Email Capture, Cookie Consent
 - No Coding Required
 - Mobile Responsive
 - Customizable Colors & Styles
 - GDPR Compliant
 - Email Subscriber Export
6. CATEGORY:
Primary: Store design
Secondary: Marketing
7. PRICING:
 - Free plan: 1 bar, with branding
 - Premium: \$99/month, unlimited bars, no branding
8. REQUIREMENTS:
 - Online Store 2.0 theme (Dawn, Refresh, etc.)
9. SUPPORT EMAIL:
support@codershive.com (or your email)

10. PRIVACY POLICY URL:
<https://announceflow.com/privacy>
11. DEMO STORE URL:
<https://announceflow-demo.myshopify.com>

Write complete app listing copy.

Prompt 2: App Screenshots

TASK: Plan and capture app screenshots

Shopify requires: Minimum 3 screenshots, Maximum 10
Size: 1600 x 900 pixels (16:9 ratio)

SCREENSHOT LIST:

1. DASHBOARD SCREENSHOT
 - Show dashboard with 3-4 bars listed
 - Mix of bar types
 - Some enabled, some disabled
 - Clean, professional look
2. CREATE BAR - PROMOTIONAL
 - Show form with sample content
 - Live preview visible
 - Colors customized
3. CREATE BAR - COUNTDOWN
 - Show countdown configuration
 - Timer visible in preview
 - Urgency-focused colors (red/orange)
4. FREE SHIPPING BAR PREVIEW
 - Show progress bar
 - Cart integration visible
 - Green success colors
5. EMAIL CAPTURE BAR PREVIEW
 - Show email input form
 - Attractive styling
 - Success message visible
6. STOREFRONT - PROMOTIONAL BAR
 - Actual bar on store
 - Dawn theme
 - Desktop view
7. STOREFRONT - MOBILE VIEW
 - Same bar on mobile
 - Shows responsiveness
8. SUBSCRIBERS SCREEN
 - Show email list
 - Export button visible
 - Stats cards
9. SETTINGS SCREEN
 - Show plan section

- Global settings
- Professional look

10. COOKIE CONSENT BAR

- GDPR compliance messaging
- Accept/Decline buttons

CAPTURE TIPS:

- Use clean test data
- Hide any debug info
- Use consistent colors in examples
- Browser at 1600x900 or use screenshot tool
- No personal data visible

11:00 AM - 1:00 PM | App Icon + Demo Store

Prompt 3: App Icon Requirements

TASK: Create or source app icon

REQUIREMENTS:

- Size: 1200 x 1200 pixels
- Format: PNG
- No text in icon (app name shown separately)
- Simple, recognizable design
- Works at small sizes (32x32)

ICON IDEAS FOR ANNOUNCEFLOW:

1. Megaphone/bullhorn (announcement)
2. Banner/ribbon shape
3. Speech bubble with "!"
4. Bell icon
5. Abstract "A" with wave

COLOR SUGGESTIONS:

- Primary: #1E3A5F (navy) or #9B59B6 (purple)
- Accent: #F39C12 (orange) or #E74C3C (red)
- Keep it simple - 2-3 colors max

OPTIONS TO CREATE:

1. Canva (free) - Search "app icon" templates
2. Figma (free) - Design custom
3. Fiverr - Quick turnaround
4. Use AI image generator

QUICK OPTION:

Use Canva:

1. Go to canva.com
2. Create design: 1200x1200
3. Search "megaphone icon" or "announcement"
4. Add simple background
5. Download as PNG

Save as: announceflow-icon.png

Prompt 4: Demo Store Setup

TASK: Set up demo store for Shopify reviewers

1. CREATE DEMO STORE:

- Go to partners.shopify.com
- Stores > Add store > Development store
- Name: "announceflow-demo"
- Purpose: Demo store for app review

2. CONFIGURE STORE:

- Add some sample products (use Shopify's sample data)
- Set up basic pages (About, Contact)
- Choose Dawn theme (or other OS 2.0 theme)

3. INSTALL YOUR APP:

- Install AnnounceFlow on demo store
- Create sample bars:

- a. Promotional: "Welcome! Get 10% off with code WELCOME10"
- b. Countdown: Sale ending in 3 days
- c. Free Shipping: "Spend \$50 more for free shipping"
- Enable all bars

4. VERIFY EVERYTHING WORKS:

- Visit storefront - bars appear
- Test dismiss functionality
- Test countdown updates
- Test free shipping updates with cart
- Mobile responsive

5. CREATE TEST CREDENTIALS:

For Shopify reviewers:

- Store URL: announceflow-demo.myshopify.com
- Note: App installs automatically

6. WRITE TESTING INSTRUCTIONS:

For Shopify review team:

"Testing AnnounceFlow:

1. Install app on test store
2. Click 'Create Bar' to add announcement bar
3. Select bar type and customize
4. Save and view storefront
5. Bar should appear at top/bottom of page

Test features:

- Create each bar type
- Toggle enable/disable
- Change colors and see updates
- Test mobile view
- Test email capture (Premium)"

Make demo store look professional and complete.

4:30 - 5:30 PM | App Submission

Prompt 5: App Submission Checklist

TASK: Submit app to Shopify App Store

SUBMISSION CHECKLIST:

PRE-SUBMISSION VERIFICATION:

- [] App installs without errors
- [] All 5 bar types work
- [] Free plan limits enforced
- [] Premium billing works
- [] GDPR webhooks return 200
- [] Mobile responsive
- [] No console errors
- [] Privacy Policy live
- [] Terms of Service live

APP LISTING COMPLETE:

- [] App name: AnnounceFlow
- [] Tagline written
- [] Description complete

- ☐ Category selected
- ☐ Pricing configured
- ☐ Screenshots uploaded (min 3)
- ☐ App icon uploaded (1200x1200)

URLS CONFIGURED:

- ☐ App URL (your Vercel URL)
- ☐ Redirect URLs
- ☐ Privacy Policy URL
- ☐ Support email

WEBHOOKS REGISTERED:

- ☐ APP_UNINSTALLED
- ☐ CUSTOMERS_DATA_REQUEST
- ☐ CUSTOMERS_REDACT
- ☐ SHOP_REDACT

DEMO STORE:

- ☐ Demo store created
- ☐ Sample bars configured
- ☐ Testing instructions written

SUBMISSION STEPS:

1. Go to partners.shopify.com
2. Apps > AnnounceFlow
3. Click "Distribution"
4. Select "Shopify App Store"
5. Fill all required fields
6. Upload assets
7. Add demo store URL
8. Add testing instructions
9. Review everything
10. Click "Submit for Review"

AFTER SUBMISSION:

- Review takes 2-4 weeks (sometimes longer)
- Shopify may request changes
- Monitor email for updates
- Don't make major changes during review

ANKUR - Day 3 Prompts

9:00 - 11:00 AM | Bug Fixes

Prompt 1: Fix P1/P2 Bugs

TASK: Fix any P1 (Critical) and P2 (High) bugs found in testing

COMMON BACKEND BUGS TO CHECK:

1. OAUTH ISSUES:
 - App won't install: Check redirect URLs, scopes
 - Session expired: Token refresh logic
 - "Not authorized": Session validation
2. DATABASE ISSUES:
 - Prisma connection errors: Check DATABASE_URL
 - Migration errors: Run `npx prisma migrate deploy`
 - Duplicate key errors: Add upsert logic
3. API ISSUES:
 - 500 errors: Add try/catch, check logs
 - 404 on valid routes: Check route naming
 - CORS errors: Configure CORS headers
4. WEBHOOK ISSUES:
 - Not receiving webhooks: Check registration
 - HMAC validation fails: Check secret
 - Webhook timeouts: Respond faster (< 5 seconds)
5. BILLING ISSUES:
 - Subscription not creating: Check GraphQL mutation
 - Callback not working: Check return URL
 - Plan not updating: Check database update logic

DEBUG PROCESS:

1. Check server logs (Vercel dashboard)
2. Check browser console
3. Add logging to isolate issue
4. Fix and test
5. Remove debug logging
6. Commit fix

For each bug:

1. Identify root cause
2. Write fix
3. Test fix
4. Commit with message: "fix: [description of what was fixed]"

Report bugs fixed to team chat.

11:00 AM - 1:00 PM | Fresh Install Test

Prompt 2: Fresh Install Test on New Store

TASK: Test complete app flow on a fresh development store

1. CREATE NEW TEST STORE:

- Go to `partners.shopify.com`
- Create new dev store: "ankur-final-test"
- Use Dawn theme

2. FRESH INSTALL TEST:

Step 1: Install app

- Click install from Partner dashboard
- Verify OAuth flow
- Verify redirect to dashboard
- Check: No errors

Step 2: Check empty state

- Dashboard should show empty state
- "Create Bar" button visible
- Plan should show "Free"

Step 3: Create first bar

- Create Promotional bar
- Save successfully
- Appears in dashboard
- Visible on storefront

Step 4: Test Free plan limit

- Try to create second bar
- Should show upgrade prompt
- Should NOT allow creation

Step 5: Test billing

- Click Upgrade
- Approve test charge
- Verify plan updates to Premium

Step 6: Test Premium features

- Create multiple bars
- Verify no branding
- Create Email Capture bar

Step 7: Test email capture

- Submit email on storefront
- Check Subscribers screen
- Export CSV

Step 8: Test uninstall

- Uninstall app
- Verify webhook fires
- Data retained (shop/redact comes later)

Step 9: Reinstall

- Install again
- Verify clean state (or data restored)

3. DOCUMENT ANY ISSUES:

- Screenshot errors
- Note steps to reproduce
- Fix immediately if critical

3:00 - 5:30 PM | Production Verification

Prompt 3: Production Environment Verification

TASK: Verify production environment is ready

1. ENVIRONMENT VARIABLES CHECK:

Verify all required env vars are set in Vercel:

```
[ ] SHOPIFY_API_KEY
[ ] SHOPIFY_API_SECRET
[ ] SCOPES
[ ] HOST (production URL)
[ ] DATABASE_URL (production database)
```

2. DATABASE VERIFICATION:

- Connect to production database
- Verify tables exist
- Verify migrations applied
- Check no test data in production

3. WEBHOOK URLS:

Verify webhooks point to production URL:

- APP_UNINSTALLED → <https://your-app.vercel.app/webhooks/app/uninstalled>
- CUSTOMERS_DATA_REQUEST → <https://your-app.vercel.app/webhooks/customers/data-request>
- CUSTOMERS_REDACT → <https://your-app.vercel.app/webhooks/customers/redact>
- SHOP_REDACT → <https://your-app.vercel.app/webhooks/shop/redact>

4. SSL VERIFICATION:

- App URL uses HTTPS
- No mixed content warnings
- Valid SSL certificate

5. ERROR HANDLING:

- Errors don't expose stack traces to users
- Errors are logged properly
- User sees friendly error messages

6. PERFORMANCE CHECK:

- App loads in < 3 seconds
- API responds in < 1 second
- No memory leaks

7. SECURITY CHECK:

- No secrets in code
- No debug mode in production
- Session tokens validated
- HMAC verification working

8. FINAL SMOKE TEST:

- Install on demo store
- Create bar
- View on storefront
- Everything works

Document verification results and report to Sunny.

SUSHIL - Day 3 Prompts

9:00 - 11:00 AM | Fix UI Bugs + Help Screen

Prompt 1: Fix UI Bugs

TASK: Fix UI bugs found in testing

COMMON FRONTEND BUGS TO CHECK:

1. LAYOUT ISSUES:
 - Elements overlapping
 - Incorrect spacing
 - Mobile layout broken
 - Scrolling issues
2. FORM ISSUES:
 - Validation not showing
 - Form not submitting
 - Values not saving
 - Select dropdowns broken
3. PREVIEW ISSUES:
 - Preview not updating
 - Colors not applying
 - Wrong bar type showing
 - Preview cut off
4. STATE ISSUES:
 - Loading state stuck
 - Error state not clearing
 - Stale data after save
 - Toggle not reflecting actual state
5. NAVIGATION ISSUES:
 - Back button not working
 - Breadcrumbs wrong
 - Links broken
 - Redirect after save not working
6. TOAST/MODAL ISSUES:
 - Toast not showing
 - Modal not closing
 - Confirmation not working
 - Multiple toasts stacking

FIX PROCESS:

1. Reproduce the bug
2. Identify the component/file
3. Debug with React DevTools
4. Fix the issue
5. Test the fix
6. Test related functionality
7. Commit: "fix: [description]"

Check browser console for errors after each fix.

Prompt 2: Help/Instructions Screen

TASK: Create Help/Instructions screen

File: app/routes/app.help.tsx

1. PAGE LAYOUT:

- Title: "Help & Getting Started"
- Organized in collapsible sections

2. GETTING STARTED SECTION:

CalloutCard or Card:

- Step 1: Create your first bar
- Step 2: Customize colors and content
- Step 3: Enable the bar
- Step 4: View on your storefront

3. BAR TYPES GUIDE:

Accordion/Collapsible for each:

Promotional Announcement

- What it's for
- Best practices
- Example use case

Countdown Timer

- What it's for
- Setting the end date
- What happens when it expires

Free Shipping Progress

- How it works with cart
- Setting threshold
- Message templates

Email Capture (Premium)

- What it collects
- Where emails are stored
- How to export

Cookie Consent

- GDPR compliance
- Accept/Decline behavior
- Privacy policy link

4. FAQ SECTION:

Collapsible questions:

- "How do I enable my bar on the storefront?"
- "Why isn't my bar showing?"
- "How do I change colors?"
- "What's the difference between Free and Premium?"
- "How do I export my email subscribers?"

5. SUPPORT SECTION:

- Email: support@codershive.com
- Response time: Within 24 hours
- [Contact Support] button

6. Add link in navigation sidebar to Help page

Show complete implementation.

11:00 AM - 1:00 PM | Multi-Theme Testing

Prompt 3: Multi-Theme Testing

TASK: Test bars on multiple Shopify themes

THEMES TO TEST:

1. Dawn (default, REQUIRED)
2. Refresh
3. Craft
4. Ride (if time permits)

FOR EACH THEME, TEST:

1. VISIBILITY:
 - Bar appears at correct position
 - Bar doesn't overlap header
 - Bar doesn't hide navigation
2. STYLING:
 - Colors display correctly
 - Font renders properly
 - No CSS conflicts with theme
3. FUNCTIONALITY:
 - Dismiss button works
 - Links/buttons work
 - Countdown updates
 - Email form submits
4. MOBILE:
 - Bar responsive on mobile
 - Touch targets adequate
 - No horizontal scroll

COMMON THEME ISSUES:

Dawn:

- Usually works well (reference theme)
- Check sticky header interaction

Refresh:

- Different header structure
- May need z-index adjustments

Craft:

- Minimal design
- Check contrast with theme colors

FIXES IF NEEDED:

- Add theme-specific CSS overrides
- Adjust z-index for stacking
- Add !important if theme overrides our styles

Document any theme-specific issues found.

3:00 - 5:30 PM | Final UI Polish

Prompt 4: Final UI Polish

TASK: Final UI polish before submission

CHECKLIST:

1. VISUAL CONSISTENCY:

- ☐ All pages use Polaris components
- ☐ Consistent spacing throughout
- ☐ Colors match Shopify admin
- ☐ Icons consistent (Polaris icons)

2. COPY/TEXT:

- ☐ No typos
- ☐ Professional language
- ☐ Helpful error messages
- ☐ Clear button labels

3. EMPTY STATES:

- ☐ Dashboard empty state
- ☐ Subscribers empty state
- ☐ Helpful, not broken-looking

4. LOADING STATES:

- ☐ Skeleton loaders for pages
- ☐ Button spinners for actions
- ☐ No layout shift on load

5. ERROR STATES:

- ☐ Network error handling
- ☐ Form validation errors
- ☐ Friendly 404 page

6. RESPONSIVE:

- ☐ Admin panel on tablet
- ☐ Admin panel on mobile
- ☐ All forms usable on mobile

7. ACCESSIBILITY:

- ☐ Keyboard navigation works
- ☐ Focus indicators visible
- ☐ Form labels present
- ☐ Color contrast adequate

8. CONSOLE:

- ☐ No console errors
- ☐ No React warnings
- ☐ No failed network requests

9. PERFORMANCE:

- ☐ Pages load quickly
- ☐ No unnecessary re-renders
- ☐ Images optimized

FINAL VERIFICATION:

- Go through every page
- Click every button

- Fill every form
- Check console after each action

Report completion to Sunny.

END OF SPRINT CHECKLISTS

Day 2 EOD Checklist (by 6 PM Sunday)

Owner	Task	Status
Sunny	Email Capture bar working on storefront	■
Sunny	Cookie Consent bar working on storefront	■
Sunny	All 5 bar types integrated	■
